## BADGER MOUNTAIN VINEYARD GOES SOLAR

Organic Vineyard adds a 3kw solar array to their Kennewick, WA Tasting Room

**WHAT: Open House to display Badger Mountain's new 3kw Solar Array.** Badger Mountain Vineyard has added solar power to their Kennewick tasting room. Solar power complements Badger Mountain's commitment to the environment through two decades of organic growing. The 30% federal tax credit and Washington State incentives help put the whole package together. Come taste the wines and see the new installation.

Representatives from Seraphim Energy will be on hand to explain the system functionality, incentives available and to answer questions.

**WHEN: April 8, 2008, 1pm to 5pm**

**WHERE: 1106 S. Jurupa St, Kennewick, WA 99338**

### FAST FACTS:

- Until the end of 2008 there is a 30% federal tax credit for businesses going solar
- Washington State residents can earn 15 cents per kWh for power produced by solar and pay no sales tax until 2009
- Modern solar systems are grid interactive – requiring no batteries and little maintenance to insure decades of clean, reliable operation

### About Badger Mountain – [www.badgermntvineyard.com](http://www.badgermntvineyard.com)

Our commitment to 100% organic viticulture begins with a basic concern for the environment, and extends to a healthier end product for our customers. We rely on only organically approved and naturally occurring substances for all vineyard applications. No chemical herbicides, insecticides, fungicides or synthetic fertilizers are used in our vineyard. The production of premium fruit is virtually assured by advantageous use of our assets: Favorable location, climate, volcanic soil, and organic techniques.

At Badger Mountain we balance tradition and technology to produce a wide array of classic varietal wines, as well as limited bottlings of wines with **no added sulfites/preservatives**. We are committed to producing organic wines, which have become nationally and internationally recognized for their consistent high quality.

### About Seraphim Energy – [www.seraphimenergy.com](http://www.seraphimenergy.com)

Seraphim Energy was founded in 2003 as a full service electrical contracting firm (Seraphim Electric Company), specializing in renewable energy systems. Grid connected wind and solar has become the backbone of their work. They are excited to about the Badger Mountain project and continued success with wineries and commercial applications of renewable energy for on site power generation.
